According to our (Global Info Research) latest study, the global Palladium Ingots market size was valued at USD 17350 million in 2023 and is forecast to a readjusted size of USD 21430 million by 2030 with a CAGR of 3.1% during review period.

Palladium is one of the rarest precious metals in the world. The element symbol Pd is one of the platinum group elements. Palladium is extremely pure, similar in appearance to platinum, and has a silver-white metallic luster in its natural state that never fades. Palladium is heat-resistant, corrosion-resistant, wear-resistant and ductile. It is interchangeable with platinum in terms of purity, rarity and durability, making it an ideal material for jewelry and gem-setting. The palladium and platinum markets are interconnected in terms of supply and demand. In most platinum and palladium mines, they occur as co-products or by-products. As a direct result of the presence of associated metals, palladium is usually a co-product or by-product, and its supply often depends on the supply, demand and price of the primary metal. Less than 10% of global palladium production is driven by palladium prices.

Global key players of palladium ingots include Nornickel, SBYSF, Anglo American Platinum (ANGPY), Impala Platinum, etc. Global top five manufacturers hold a share over 95%. South Africa is the largest producer of palladium ingots holds a share over 46%. In terms of product, 99.95% is the largest segment, with a share over 53%.
