## Abstracts

The global Palladium On Carbon and IrO<sub>2</sub> Catalyst market size is expected to reach \$ 1655 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Palladium on carbon (PAC) and IrO<sub>2</sub> catalysts are functional catalytic materials, respectively using palladium-supported activated carbon and iridium dioxide as the active component. PAC is primarily used in hydrogenation and organic synthesis, while IrO<sub>2</sub> is mainly used in water electrolysis for oxygen evolution, electrochemical reactions, and high-corrosion-resistant catalytic applications.

Upstream suppliers mainly include precious metals such as palladium and iridium, activated carbon, oxide supports, chemical reagents, and functional materials. Downstream applications primarily target pharmaceuticals, fine chemicals, new energy hydrogen production, electrolyzers, scientific research, and environmental catalysis.

The global market price for PAC and IrO<sub>2</sub> catalysts is \$2126/kg, with annual sales of approximately 578 tons and a global annual production capacity of approximately 600 tons. The industry profit margin is 20%.
