According to our (Global Info Research) latest study, the global Pallet Flow Rack Systems market size was valued at USD 504.8 million in 2023 and is forecast to a readjusted size of USD 667.7 million by 2030 with a CAGR of 4.1% during review period.

Pallet flow rack or gravity flow racking, is a type of storage system that uses gravity to move pallets from the loading dock to the picking aisle. Pallet flow racks are often used in warehouses and distribution centers where inventory turnover is high, and storage density is a priority. Unlike other storage methods, pallet flow allows businesses to store pallets deep within the rack, making full use of the height of the facility. Additionally, pallet flow racks can be designed to store all pallets in a first-in, first-out (FIFO) orientation, ensuring consistent inventory rotation. As a result, pallet flow racking is an efficient and effective way to increase storage density and improve picking productivity. Pallet flow racking uses inclined flow lanes to store products on pallets or cartons. These pallet flow lanes are fed from the rear of the rack, allowing you to store merchandise multiple pallets deep. When a product is picked from the front of each pallet flow lane, empty pallets are moved to the rear to maintain product flow. This type of storage system is very versatile and can be used in applications where high-density storage and fast order picking are important. Pallet flow racking can also be configured to work with various types of forklifts.

Global key players of Pallet Flow Rack Systems include stow Group (Averys), SSI SCHAEFER, UNARCO, Frazier Industrial and Mecalux, etc. Global top five manufacturers hold a share about 25%. Europe is the largest producer of Pallet Flow Rack Systems, followed by United States.
