Palletised Mobile Robot is a pallet yarder used with unmanned forklift or AGV, Pallet Finisher AMR achieves higher productivity and healthier working environment.

Palletised mobile robots are incorporated into intelligent warehousing systems that can work in tandem with warehouse management systems (WMS) and other automated equipment. This integration can improve the overall efficiency of warehouse operations. In some large warehousing and manufacturing scenarios, multiple palletised mobile robots can work collaboratively to complete complex tasks. This collaborative capability increases the flexibility and scalability of the overall system. Through the application of machine learning and artificial intelligence technologies, palletised mobile robots can better adapt to different environments and tasks. Machine learning can be used for path planning, obstacle avoidance and decision making. The development of battery technology is crucial for the range and working time of palletised mobile robots. With the improvement in lithium battery technology, the energy density and charging speed of the robots have improved. The market for palletised mobile robots is gradually becoming commercialised and is expected to continue growing in the coming years. Manufacturers and suppliers are also investing more in this segment.
