The global Palm Oil Glycerin market size is expected to reach \$ 3059 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global Palm Oil Glycerin production reached approximately 2.02 million tons, with an average global market price of around US\$980 per ton.

The gross profit margin of major companies in the industry is between 18%–30%.

In 2025, the global production capacity of palm oil glycerin was approximately 2.69 million tons.

Palm Oil Glycerin is a bio-based glycerol produced as a by-product of palm oil refining and biodiesel manufacturing processes. It is widely used as a humectant, solvent, sweetener, and chemical intermediate due to its hygroscopicity, safety profile, and compatibility with food, pharmaceutical, cosmetic, and industrial applications.

The industrial chain of Palm Oil Glycerin includes upstream palm oil feedstock, transesterification and hydrolysis processes, and crude glycerol refining. The midstream focuses on purification, distillation, and grade upgrading. Downstream applications cover personal care products, pharmaceuticals, food ingredients, tobacco humectants, resins, coatings, antifreeze, and chemical synthesis, supported by logistics, quality certification, and regulatory compliance services.

The palm oil glycerin market is supported by steady demand from personal care, pharmaceutical, and food industries. As a renewable and bio-based ingredient, palm-derived glycerin benefits from sustainability trends and expanding biodiesel production.

Growth in cosmetics and hygiene products, especially in emerging markets, supports volume demand. Price volatility of palm oil feedstock remains a key influencing factor. Overall, the market is expected to grow steadily as downstream applications continue to expand and bio-based chemical adoption increases.

This report studies the global Palm Oil Glycerin production, demand, key manufacturers, and key regions.
