## Abstracts

A pan head is a metal or plastic apparatus placed on top of a pan head tripod head that increases stability and provides faster, more accurate rotation of the camera for the photographer. A pan head, also called pan and tilt head, allows independent rotation of the camera about two or three perpendicular axes, which normally do not intersect. Typical pan heads have lockable levers for each axis, a scale marked in degrees at least for the vertical axis, and one or more spirit levels. This construction is significantly more complicated than that of a ball head.
