Pancreatic cancer arises when cells in the pancreas, a glandular organ behind the stomach, begin to multiply out of control and form a mass. These cancerous cells have the ability to invade other parts of the body. A number of types of pancreatic cancer are known. The most common, pancreatic adenocarcinoma, accounts for about 90% of cases, and the term 'pancreatic cancer' is sometimes used to refer only to that type. These adenocarcinomas start within the part of the pancreas that makes digestive enzymes. Several other types of cancer, which collectively represent the majority of the no adenocarcinomas, can also arise from these cells. About 1-2% of cases of pancreatic cancer are neuroendocrine tumors, which arise from the hormone-producing cells of the pancreas. These are generally less aggressive than pancreatic adenocarcinoma.

Global Pancreatic Cancer Diagnostic main manufacturers include Siemens, GE Healthcare, Roche, Philips Healthcare, totally accounting for 15% of the market. North America is the largest market, with a share about 40%. As for the types of products, it can be divided into imaging, tumor biomarker, biopsy and others. The most common type is imaging, with a share over 63%. As for the types of applications, it is widely used in hospitals, clinics and others. The most common application is in hospitals, with a share over 45%.
