Abstracts

The global Pancreatin market size is expected to reach \$ 174 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Pancreatin is a digestive enzyme preparation derived from animal pancreas, most commonly porcine sources, and typically contains a mixture of proteases, lipase, and amylase. It is used to aid the digestion and absorption of proteins, fats, and carbohydrates. Pancreatin is widely applied as a pharmaceutical ingredient for the treatment of pancreatic exocrine insufficiency and related digestive disorders, and is also used as a functional enzyme ingredient in food and feed applications to improve digestive efficiency and nutrient utilization.

The pancreatin market is primarily driven by the rising prevalence of digestive disorders and global population aging. Increasing diagnosis and treatment of conditions such as chronic pancreatitis, cystic fibrosis, and post-pancreatectomy digestive insufficiency support steady demand for pharmaceutical-grade pancreatin products. In addition, growing awareness of digestive health and nutrient absorption is expanding the use of pancreatin in health-related and functional food applications. Demand from food processing and animal nutrition industries for efficient digestive enzymes, along with improvements in formulation technologies and quality standards, further underpins market growth.

The major manufacturers of Pancreatin in the world are Nordmark, Sichuan Deebio and Terhormon, and the top three manufacturers in the world occupy about 46% of the market share. North America is currently the largest pancreatic enzyme market in the world, with a market share of approximately 34%. This is followed by Europe and China with a market share of 29% and 13% respectively. In terms of product type, Porcine

Pancreatin enzymes is the largest segment with approximately 84% market share, while in terms of applications, Pharma Industry is the largest downstream segment with approximately 86% market share.
