Abstracts

The global Panel Mounted Coupler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The panel mounted connector is a hydraulic or pneumatic quick disconnect connector designed to be installed directly on the panel or partition. This type of coupler is usually used in applications that require quick and easy connection and disconnection of hydraulic or pneumatic pipelines, such as industrial machinery, agricultural equipment and construction vehicles. The panel mounted coupler usually consists of two paired halves: socket and plug. The socket is installed on the panel or partition, while the plug is connected at the end of the hydraulic or pneumatic pipeline. When the plug is inserted into the socket, the two halves are sealed together to form a safe and leak-free connection. The benefits of using panel mounted couplers include increased productivity, reduced downtime, and improved safety. By realizing quick and easy connection and disconnection of hydraulic or pneumatic pipelines, the panel mounted coupling can quickly maintain, repair and replace hydraulic or pneumatic components, thus reducing downtime and improving productivity.
