## Abstracts

According to our (Global Info Research) latest study, the global Panel Mounted Power Quality Meter market size was valued at US\$ 172 million in 2025 and is forecast to a readjusted size of US\$ 245 million by 2032 with a CAGR of 4.1% during review period.

In 2025, the global production of panel-mounted power quality meters reached 181,800 units, with an average selling price of US\$920 per unit. The global annual production capacity for panel-mounted power quality meters is approximately 300,000 units, with a gross profit margin of approximately 26.3%. Panel-mounted power quality meters are instruments that integrate power metering, signal acquisition, data processing, and communication functions within a single panel or modular housing. They are typically used for real-time monitoring and analysis of voltage, current, power, frequency, harmonics, harmonic distortion, and event recording in power distribution systems, providing data and alarms through interface display or remote transmission. The term 'panel-mounted' refers to its design, which facilitates installation on electrical control cabinets or panels, and streamlines on-site wiring and maintenance. The upstream of the panel-mounted power quality meter industry chain includes semiconductors and sensing elements, electronic components, peripheral packaging and materials, etc.; the midstream consists of panel-mounted power quality meter manufacturers; and the downstream mainly comprises power companies and industrial enterprises.
