Abstracts

The global Panko market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Panko is a type of Japanese-style breadcrumb that is typically used in cooking and baking. Unlike traditional breadcrumbs, which are made from finely ground bread, panko is made from crustless bread that is processed into coarse flakes.

Panko breadcrumbs are renowned for their unique texture and light, crispy coating. They have a larger surface area compared to regular breadcrumbs, allowing for better browning and a more delicate crunch when cooked. Panko breadcrumbs are often preferred for their ability to create a crispy and crunchy texture without absorbing excessive amounts of oil.

Panko breadcrumbs are commonly used in various culinary applications, such as breading for fried foods, topping for casseroles or gratins, and as a filler in meatballs or croquettes. They are versatile and can be used in both savory and sweet preparations.

Panko is now popular worldwide and is available in different variations, including plain, seasoned, or flavored varieties. It adds a distinct crispy texture to dishes and is particularly favored in Japanese cuisine and for creating Asian-inspired dishes.
