According to our (Global Info Research) latest study, the global PAO Synthetic Lubricants market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Synthetic oil is a lubricant consisting of chemical compounds that are artificially made. Synthetic lubricants can be manufactured using chemically modified petroleum components rather than whole crude oil, but can also be synthesized from other raw materials. Polyalphaolefin is by far the most common major synthetic base oil used in industrial and automotive lubricants.

Synthetic lubricants provide numerous benefits when used for automotive applications such as excellent thermal stability and low friction. Rising awareness regarding the advantages of the product, as opposed to its mineral counterparts, will augment industry growth over the forecast period. A major application of synthetic lubricants is their use as heat transfer fluids in heavy machinery and heat exchangers. Rising industrial sector in Asia Pacific countries will propel product demand over the forecast period.
