Abstracts

The global Paper Labels market size is expected to reach \$ 66359 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

Paper labels are identification products that use paper as the principal information-bearing and visual facestock and are attached to products, packages, containers or logistics units by means of pressure-sensitive, wet-applied, heat-activated or dry-gummed adhesives. Their principal functions include brand presentation and decoration, product-name and ingredient disclosure, barcode and traceability identification, regulatory information, price and logistics-data display, anti-counterfeiting and promotional interaction. Compared with ordinary printed paper, paper labels must provide suitable printability, die-cutting performance, dimensional stability, adhesive reliability, labeling-machine compatibility, storage durability and application performance under conditions such as low temperatures, moisture, oils and abrasion. In 2025, global sales volume for paper labels stands at 24,488 million square meters, with an average converted sales price of \$1.90 per square meter and an industry average gross margin of 20%-30%. The upstream portion of the paper-label value chain supplies coated label paper, uncoated paper, kraft paper, direct thermal paper, metallized paper, recycled paper and textured specialty paper; acrylic, rubber-based and hot-melt pressure-sensitive adhesives as well as starch-, dextrin- and casein-based wet glues; glassine release paper, silicone-coated kraft liners and limited volumes of PET liners; and printing inks, varnishes, laminates, stamping foils and functional coatings, while the converting stage comprises labelstock coating, artwork and layout preparation, plate making, flexographic, offset, gravure and digital printing, varnishing, lamination, hot-foil stamping, embossing, variable-data coding, die-cutting, matrix stripping, slitting, rewinding, sheeting, cut-and-stack finishing, quality inspection and packaging, with RFID inlays, security materials or temperature-indicating functions incorporated into

selected higher-value products, after which finished labels are supplied to food, non-alcoholic beverage, beer, wine and spirits, pharmaceutical and medical-product, personal-care, household-cleaning, retail, e-commerce logistics, industrial-chemical, automotive-component and durable-consumer-goods companies for application by automatic or semi-automatic labelers, thermal printers or manual processes, followed at end of life by packaging-waste collection, release-liner recovery, fiber recycling or energy recovery.
