## Abstracts

The global Paper Surface Sizing Agents market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Paper surface sizing agents are chemical compounds applied to the surface of paper during the manufacturing process to improve its properties and performance. These agents are designed to enhance the paper's surface strength, reduce its absorbency, and provide resistance to penetration by liquids, such as water or ink. Common types of surface sizing agents include starch, synthetic polymers, and combinations of chemicals tailored to specific paper grades and applications. By controlling the surface characteristics of the paper, sizing agents contribute to improved printability, reduced feathering of ink, and increased resistance to water-based damage. The selection of the appropriate surface sizing agent depends on the desired properties of the final paper product and its intended end-use, such as in printing, packaging, or other applications.

This report studies the global Paper Surface Sizing Agents production, demand, key manufacturers, and key regions.
