Abstracts

The global Paperboard Partition market size is expected to reach \$ 1123 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032). A paperboard partition is a formed or die-cut paperboard insert used inside a package to separate, cushion, and stabilize multiple items (such as bottles, jars, cans, electronics, or components) during handling and transport. It is typically designed as cell dividers (grid-style) or interlocking inserts that create individual compartments, helping prevent surface abrasion, impact damage, and product-to-product contact while improving packing density and shipment integrity.

In 2025, global Paperboard Partition production reached approximately 574 Kilotons, with an average global market price of around US\$ 1,500 per ton.

Upstream, paperboard partitions depend on fiber and pulp supply (virgin or recycled), paperboard manufacturing (linerboard/chipboard/solid bleached board, etc.), and converting inputs such as adhesives, inks, coatings, and die-cutting tooling. Midstream converters transform sheets into partitions through printing (optional), die-cutting, slitting, scoring, and folding/assembly. Downstream, partitions flow to packaging operations and co-packers, then into brand owners and manufacturers that pack goods for distribution; demand is ultimately driven by logistics requirements, retail-ready packaging needs, damage-rate targets, sustainability policies, and regulations across end-use industries.

The cost structure is dominated by raw paperboard/fiber cost (often the largest share), followed by converting costs such as die-cutting/creeping, scoring, gluing, and assembly labor. Additional cost elements include tooling and design engineering (die creation, prototypes), overhead and quality control (dimensional accuracy, strength checks), and waste/scrap from die-cut layouts. Packaging and logistics (bundling, palletization, freight) can be significant because partitions are bulky relative to weight, and optional printing/coatings add incremental cost depending on moisture resistance or branding

needs.
