Abstracts

In the past, the application of automatic control in paper production is very limited, mainly focused on the local simple instrument control in the pulping process and the electric drive control of paper machine, and a lot of control content is realized by manual adjustment on the spot. In recent years, many manufacturers in the production process of the key link of the automatic control system technology transformation, such as cooking control, disk grinding control, pulp control, pulp flow control, paper machine transmission, paper machine drying part of the multi-section ventilation control (heat pump control) and moisture quantitative detection, has achieved obvious results. It is moving towards centralized control of the whole plant. Pulp and paper production can be roughly divided into: pulp section, paper section, alkali recovery section, water treatment section. As its auxiliary section, alkali recovery section and water treatment section, is also an important part of paper production, DCS control system in these two sections has also been very widely used.
