The global Paprika Oleoresin market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

Paprika Oleoresin is a deep red colored, semi viscous liquid extracted from dried red pepper or paprika. It draws its deep red color from various Carotenoids present in Red Pepper. Paprika Oleoresin is a natural extract without any antioxidant. It is highly sensitive to light, heat and air. The paprika oleoresins are produced by solvent extraction of dried, ground red pepper fruits, using a solvent-system compatible with the lipophilic/hydrophilic characteristics of the extract sought and subsequent solvent-system removal. The solvents most commonly used for paprika oleoresin extraction are trichloroethylene, ethylacetate, acetone, propan-2-ol, methanol, ethanol and n-hexane.
