Para-aramid nanofiber? is a new type of nano-polymer material composed of para-aramid polyamide molecular chains. It has the characteristics of high strength and high modulus, high temperature resistance, and corrosion resistance. It solves the problems of traditional aramid fibers with smooth surface, strong inertness, and difficulty in processing. It can be efficiently compounded through physical/chemical/self-assembly methods to prepare aramid nanofiber-based materials with different properties and applications.

This report is a detailed and comprehensive analysis for global Para-Aramid Nanofibers market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
