The global Para Chloro Phenol (PCP) market size is expected to reach \$ 211 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Para Chloro Phenol (PCP), also known as 4-Chlorophenol, is a chlorinated phenolic organic compound with the molecular formula C_6H_5ClO . It refers to a phenol derivative in which the chlorine atom is substituted at the para position relative to the hydroxyl group on the benzene ring. It is typically supplied as a white to light-colored crystalline solid, has a phenolic odor, is slightly soluble in water, and is readily soluble in many organic solvents such as alcohols, ethers, and aromatic hydrocarbons.

In 2025, the global production of Para Chloro Phenol (PCP) reached 95,600 tons, with an average selling price of US\$ 1,642 per ton. Industry gross margins are estimated at approximately 20%.

Asia, especially China and India, is expected to remain the major production and consumption region due to its strong agrochemical, pharmaceutical intermediate, and fine chemical manufacturing base. However, future growth will be constrained by the toxic and persistent nature of chlorophenols, stricter environmental regulations, wastewater treatment requirements, hazardous waste management, and occupational safety controls. As a result, market opportunities will increasingly focus on compliant and stable supply, high-purity and low-impurity grades, cleaner and more continuous production processes, customized downstream specifications, and long-term supply relationships with agrochemical and pharmaceutical intermediate customers.

This report studies the global Para Chloro Phenol (PCP) production, demand, key manufacturers, and key regions.
