According to our (Global Info Research) latest study, the global Paraben Preservatives market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Paraben is white crystalline powder or colorless crystal, easily soluble in alcohol, ether and acetone, very slightly soluble in water, with a boiling point of 270-280°C. It is mainly used as a bactericidal preservative in organic synthesis, food, cosmetics, and medicine, and also as a feed preservative. Because it has a phenolic hydroxyl structure, it has stronger antibacterial properties than benzoic acid and sorbic acid. Its mechanism of action is to destroy the cell membrane of microorganisms, denature proteins in cells, and inhibit the activity of respiratory enzymes and electron transfer enzymes of microbial cells.
