## Abstracts

A parachute release is a device used to uncouple the parachute and release the parachute. It usually consists of mechanical components that are used to quickly and safely untie the connection between the parachute and the skydiver or aircraft when needed, so that the parachute can deploy normally and complete the task accurately. The parachute release device is a critical safety device used to ensure that the parachute can be released correctly and promptly when needed, and to help the pilot or user complete the mission safely.

According to our (Global Info Research) latest study, the global Parachute Release Device market size was valued at US\$ 597 million in 2023 and is forecast to a readjusted size of USD 841 million by 2030 with a CAGR of 5.0% during review period.

The development of the parachute release device market is closely related to the overall development of the parachute market. With the wide application of parachutes in military, civilian and sports fields, the market demand for parachute release devices has also shown a steady growth trend. In the military field, parachute release devices are key equipment in airborne operations, airdropping supplies and rescue missions. In the civilian field, with the gradual rise of low-altitude economy, parachute release devices are increasingly used in UAV emergency parachute systems, extreme sports and other fields. To sum up, the parachute release device market has broad development prospects and huge market potential.
