Abstracts

The global Paraffin Wax Semi Refined market size is expected to reach \$ 4360 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Semi-refined paraffin wax is a medium-purity paraffin wax that has undergone basic deoiling and filtration. Its oil content is generally between 0.5% and 1.5%, and its color is slightly yellow or milky white, retaining some natural alkanes and trace impurities. The melting point range is typically 54-64°C. It is widely used in industrial applications such as candles, rubber, papermaking, and wood moisture protection. The average price of this product is approximately US\$1750 per ton, with global sales of approximately 1.9 million tons.

Semi-refined paraffin wax is the 'mainstay' of the global paraffin wax market, especially dominating the candle manufacturing sector. Its low cost, good formability, and stable combustion make it an ideal raw material for mass-market consumer products. With the rise of environmentally friendly candles and fragrance products, some high-end candle brands are also transitioning to low-oil, low-odor semi-refined paraffin wax. The paraffin wax market is currently undergoing a transitional period characterized by both 'consumption upgrading' and 'green substitution.' The upstream sector relies on petroleum refining byproducts (such as vacuum residue and lubricating oil fractions), making it significantly affected by crude oil prices and refinery operating rates. The downstream sector encompasses multiple industries including candles, packaging, cosmetics, rubber, and hot melt adhesives, with particularly rapid growth in scented candles, food-grade packaging, and natural skincare products. Looking ahead, with increasingly stringent environmental regulations and growing consumer focus on sustainable materials, synthetic paraffin wax, bio-based waxes, and high-purity paraffin wax will become new market focal points. Meanwhile, the Asia-Pacific region (especially China and India) will continue to dominate global production capacity and consumption,

driving the industry chain towards high-end refining and functionalization. This report studies the global Paraffin Wax Semi Refined production, demand, key manufacturers, and key regions.
