According to our (Global Info Research) latest study, the global Parallel Bundled Overhead Insulated Cables market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Parallel bundled overhead insulated cable is a power transmission line that consists of multiple exposed overhead cables arranged side by side. Each cable is twisted by multiple strands of aluminum alloy or magnesium alloy wires, and the wires are separated by insulating materials. The entire cable system is suspended from the brackets, forming a parallel line. This kind of cable is usually used in medium and low voltage power transmission and distribution systems, mainly for power supply in urban, rural and industrial areas. Compared with underground cables, parallel bundled overhead insulated cables have the advantages of easy installation, easy maintenance, and low cost.
