## Abstracts

The global Parallel Bundled Overhead Insulated Cables market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Parallel bundled overhead insulated cable is a power transmission line that consists of multiple exposed overhead cables arranged side by side. Each cable is twisted by multiple strands of aluminum alloy or magnesium alloy wires, and the wires are separated by insulating materials. The entire cable system is suspended from the brackets, forming a parallel line. This kind of cable is usually used in medium and low voltage power transmission and distribution systems, mainly for power supply in urban, rural and industrial areas. Compared with underground cables, parallel bundled overhead insulated cables have the advantages of easy installation, easy maintenance, and low cost.
