## Abstracts

The global Parallel Co-rotating Twin-screw Extruder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market prospect for parallel co-rotating twin-screw extruders is promising and poised for growth. These machines offer numerous advantages in various industries, including plastics, rubber, food, and pharmaceuticals. Their parallel screw design allows for increased throughput, improved mixing efficiency, and enhanced torque capabilities. This makes them highly desirable for compounding, blending, and melt processing applications. The demand for customized, high-quality products is rising, driving the need for advanced extrusion technology. However, competition from alternative technologies and the requirement for specialized expertise may pose challenges. Ongoing technological advancements, such as improved screw designs and control systems, coupled with the increasing demand for efficient and precise manufacturing processes, will contribute to the continued market expansion of parallel co-rotating twin-screw extruders.

The parallel co-rotating twin-screw extruder is a highly versatile and efficient machine utilized in various industrial processes. Unlike the cone co-rotating twin-screw extruder, the parallel design consists of two screws that run parallel to each other within the barrel-shaped housing. These screws rotate at the same speed in the same direction, conveying and mixing materials as they move down the barrel. The parallel configuration allows for increased throughput, higher torque capabilities, and enhanced mixing efficiency. This extruder is widely used in industries such as plastics, rubber, food processing, and pharmaceuticals for compounding, blending, and melt processing applications. Its ability to handle a wide range of materials and provide precise control

over product quality makes it a valuable tool in industrial manufacturing.
