Abstracts

The global Parallel Electric Gripper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The rise of parallel electric grippers is largely driven by the development of flexible production tools represented by collaborative robots. After several years of development, the application boundary of parallel electric grippers has gradually expanded, and its market demand has increased significantly.

The electric gripper is an end tool of a mechanical arm, which is composed of a motor, a reducer, a transmission system and a gripper. The gripper of the parallel electric gripper is a parallel structure. Parallel electric grippers can realize the action of clamping and releasing items through electric control. In modern industrial production, parallel electric grippers are widely used in automated production lines and other fields, which can realize efficient, fast and accurate material picking and placing operations, and improve production efficiency and quality.
