## Abstracts

The global Parallel Gear Reducers market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

They consist of two parallel shafts, one connected to the input source (such as a motor) and the other connected to the output device (such as a conveyor or a pump). The input shaft transmits torque to the gears inside the gearbox, which in turn transmit power to the output shaft.

Parallel gear reducers are mechanical devices that are used to reduce the rotational speed and increase the torque of a power transmission system.

This report studies the global Parallel Gear Reducers production, demand, key manufacturers, and key regions.
