The global Parallel Seam Sealers market size is expected to reach \$ 54 million by 2029, rising at a market growth of 5.5% CAGR during the forecast period (2023-2029).

Global key players of parallel seam sealers include Nippon Avionics, AMADA WELD TECH, The 2ND Research Institute of China Electronics Technology, Polaris Electronics and Pyramid Engineering Services. The top five players hold a share over 65%. North America is the largest producer, has a share about 32%, followed by China, with share 30%. China is the largest market, has a share about 37%, followed by North America, and Japan, with share 17% and 16%, separately. In terms of product type, Fully Automatic is the largest segment, with a share over 45%. In terms of product application, the largest application is Optoelectronic Devices, with a share about 32%, followed by MEMS.

Parallel seam sealer, also known as spot welding machine, seam welding machine, and spot welding integrated machine, is mainly composed of two parts: the upper computer (PC) and the lower computer (single-chip microcomputer). Divided into manual parallel seam sealer, semi-automatic parallel seam sealer, fully automatic parallel seam sealer, suitable for microelectronic devices, optoelectronic devices, crystal/SAW and other packaging.

Principle of parallel sealing welding:

Pressure is applied to the base and lid, welded by electric current. First put the cover on the base, install the roller electrode above the cover, and pass electricity to the cover and the base through the roller electrode. The contact resistance between the electrode and the cover is very high, thereby generating Joule heat, which is used for welding.

The electrode is energized while rolling from the edge of the cover. As the current flows, a certain area will be welded. When the welded part is continuously welded without gaps, it means that the effect of airtight packaging has been achieved. Most of the electronic components in the base are quartz crystals, microelectronic sensors and optoelectronics. Parallel seal welding and resistance welding also use pressure and electricity to weld the base to the metal cover.
