The global Parallel Shaft Planetary Reducer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A parallel shaft planetary reducer is a mechanical transmission device used to reduce the rotational speed on the input shaft and increase the torque on the output shaft. This type of reducer usually consists of an external gear (external ring gear) and multiple internal gears (planetary gears). These planetary gears are arranged in a parallel manner around the external ring gear, hence the name parallel axis planetary reducer.
