According to our (Global Info Research) latest study, the global Parallel Thread Rebar Coupler market size was valued at US\$ 518 million in 2024 and is forecast to a readjusted size of USD 761 million by 2031 with a CAGR of 5.5% during review period.

A Parallel Thread Rebar Coupler is a device used to connect two rebar pieces by securely fastening them with parallel threads. The coupler features threads at both ends, allowing the rebar to be screwed into the coupler, creating a strong and stable connection. This type of coupler is commonly used in construction projects where high strength and durability are required, such as in buildings, bridges, tunnels, and other reinforced concrete structures. It offers several advantages, including increased construction efficiency, elimination of the need for welding (which can cause heat damage), and enhanced connection strength. Parallel thread rebar couplers improve the overall quality of rebar connections and contribute to the safety and stability of the structure.
