The global Parking Lot Entry&Exit Control Equipment market size is expected to reach \$ 8351 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Parking Lot Entry&Exit Control Equipment is an intelligent access management system designed to regulate vehicle entry and exit in parking facilities through automated identification, barrier control, and transaction verification functions. It integrates sensing modules, embedded control units, and communication interfaces to ensure real-time vehicle recognition, access authorization, and coordinated traffic flow management, improving operational efficiency and security at parking facility entrances and exits. Its advantages include high operational reliability, fast response in access control, strong system integration capability, and improved throughput for vehicle entry and exit management. In 2025, the capacity utilization rate was about 80%, and the average gross margin was approximately 28%. Production in 2025 was 3.92 million units with an average price of 1350 USD per unit. The upstream segment includes main control chips, display panels, and engineering plastics, with representative suppliers such as Qualcomm, Texas Instruments, Samsung Display, LG Display, and SABIC. The midstream segment focuses on hardware integration, embedded control system development, access control algorithm implementation, and parking management system deployment. The downstream segment is primarily concentrated in public parking facilities and commercial parking operators, with representative customers including Prologis, Simon Property Group, Brookfield Properties, and China Resources Land.

Parking Lot Entry&Exit Control Equipment is a device specially designed for managing and controlling the exit of a car park to ensure that vehicles leave the car park in an

orderly and safe manner, and to carry out the necessary billing, identification, and exit verification. These devices are usually integrated with automation and intelligent technology and are widely used in large commercial car parks, shopping centres, airports, office buildings and other places.
