Abstracts

The global Parking Lot Management Terminal market size is expected to reach \$ 8351 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Parking Lot Management Terminal is an intelligent hardware device used in parking infrastructure to enable entry and exit control, payment processing, data interaction, and centralized parking operation management. It integrates embedded computing, display interface, and communication modules to support real-time vehicle identification, transaction handling, and system coordination, improving operational efficiency and user experience in parking facilities. Its advantages include high system stability, efficient transaction processing, strong integration capability, and improved operational automation for parking management systems. In 2025, the capacity utilization rate was about 80%, and the average gross margin was approximately 28%. Production in 2025 was 3.92 million units with an average price of 1350 USD per unit. The upstream segment includes main control chips, display panels, and engineering plastics, with representative suppliers such as Qualcomm, Texas Instruments, Samsung Display, LG Display, and SABIC. The midstream segment focuses on terminal hardware integration, embedded system development, software platform integration, and parking management system deployment. The downstream segment is primarily concentrated in public parking facilities and commercial parking operators, with representative customers including Prologis, Simon Property Group, Brookfield Properties, and China Resources Land.

Parking Lot Management Terminal demand is closely linked to the digitalization of urban parking infrastructure and the expansion of smart city systems. Deployment is increasingly driven by the need for automated access control, cashless payment

integration, and real-time parking data management in both public and commercial facilities. Its role is shifting from a simple transaction interface to an edge node within broader parking and mobility management ecosystems. However, adoption is influenced by upgrade cycles of legacy systems and integration complexity with heterogeneous software platforms. Future growth will depend on interoperability with cloud-based mobility services and standardized smart infrastructure protocols rather than standalone terminal functionality.
