Parking space detection camera is a camera system used to detect the availability of parking space in the parking lot or garage. These cameras usually use advanced image processing algorithms to analyze the camera lens and determine whether the parking space is occupied or available. The parking space detection camera is usually installed on the pole or other structure above the parking area, and can cover a large number of parking spaces from a single location. They are usually connected to the centralized management system, which can provide real-time information about parking availability to drivers or parking attendants. In addition to using cameras, some parking space detection cameras also use infrared sensors or other technologies to detect the presence of vehicles. These systems are particularly useful in low light conditions or when visibility is limited.
