## Abstracts

Partially hydrogenated oil is one of the major alternatives among the food manufacturers to enhance the shelf of their food products. Generally, oils are in the liquid state at room temperature which is altered by adding hydrogen atom. Adding hydrogen make oils more solid and more suitable to use in various end-use products such as bakery, biscuits, and others.

According to our (Global Info Research) latest study, the global Partially Hydrogenated Oil market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
