Abstracts

The global Partially Threaded Hex Bolts market size is expected to reach \$ 5449 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

In 2025, global Partially Threaded Hex Bolts production reached approximately 1.46 million tons, with an average global market price of around US\$2,800 per ton.

The gross profit margin of major companies in the industry is between 15%-28%.

In 2025, the global production capacity of Partially Threaded Hex Bolts was approximately 1.95 million tons.

Partially Threaded Hex Bolts are fastening components with a hexagonal head and threads covering only part of the shank. Compared with fully threaded bolts, the unthreaded shank provides better shear strength, alignment, and load-bearing performance, making them suitable for structural assembly, machinery, automotive, construction, and heavy equipment applications.

The industrial chain of Partially Threaded Hex Bolts covers upstream materials such as carbon steel, alloy steel, stainless steel, wire rods, heat treatment agents, coatings, lubricants, and packaging materials. The midstream consists of wire drawing, cold heading, thread rolling, heat treatment, surface coating, inspection, and packaging. Downstream applications mainly include construction structures, machinery assembly, automotive components, rail equipment, energy facilities, and industrial maintenance markets.

Mechanical assembly, engineering installation and vehicle manufacturing raise stable demand for partially threaded hex bolts. The product owns good fastening strength and stress dispersion effect, suitable for heavy-duty connection scenarios. Standardized production and surface anti-rust treatment enhance its overall practical performance.

This report studies the global Partially Threaded Hex Bolts production, demand, key manufacturers, and key regions.
