According to our (Global Info Research) latest study, the global Particleboard Panels market size was valued at USD 21680 million in 2022 and is forecast to a readjusted size of USD 27910 million by 2029 with a CAGR of 3.7% during review period.

Chipboard – also sometimes referred to as Particle Board or Low Density Fibreboard – is made by mixing small wood particles with epoxy resin, which are pressed together under intense heat and pressure to produce a rigid board, typically with a smooth surface. Chipboard is available in a variety of densities to suit different needs and uses, including low, medium and high-density varieties. The lower densities are fairly soft and pliable, while the higher-density chipboards are more rigid and can be used for more heavy-duty applications.

The particleboard panels market is a segment of the global wood-based panel industry that revolves around the production and distribution of particleboard panels.

Particleboard panels are engineered wood products made from wood particles, such as sawdust and wood shavings, combined with adhesive resins.
