According to our (Global Info Research) latest study, the global Parts on Demand Manufacturing Service market size was valued at US\$ 12384 million in 2025 and is forecast to a readjusted size of US\$ 18679 million by 2032 with a CAGR of 6.1% during review period.

Parts on Demand Manufacturing Service (PDMS) is a flexible manufacturing model based on digital technology. Its core lies in its ability to rapidly generate customized parts directly from 3D digital models based on real-time data-driven processes and personalized customer needs or dynamic orders, eliminating the mold development and long-cycle inventory preparation required in traditional mass production. Utilizing technologies such as 3D printing, CNC machining, and rapid injection molding, it enables agile production of small batches of diverse parts, characterized by short delivery cycles, low initial tooling costs, and distributed production, thus reshaping the global manufacturing supply chain.

The service's industry chain is clear: upstream mainly includes raw material, manufacturing equipment, and industrial software suppliers; midstream consists of on-demand manufacturing service providers who integrate global capacity through cloud platforms to receive and fulfill orders; downstream applications are widely used in sectors with strong demand for personalization, rapid prototyping, or spare parts, such as automotive manufacturing, aerospace, medical devices, and consumer electronics.

The industry has broad prospects and is expected to continue its rapid growth. Its development is driven by the major trend of manufacturing transforming towards intelligence and service. In the future, it will be more deeply integrated with artificial

intelligence and the Internet of Things, and penetrate into more traditional industries, realizing a fundamental shift from 'mass production' to 'mass customization'.
