## Abstracts

The global Party Robot Rentals market size is expected to reach \$ 1068 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Party robot rental refers to a service model where rental service providers offer clients intelligent robot equipment with interactive performance, greeting, entertainment, simple service, or marketing display functions, along with an integrated service model that includes transportation, deployment, on-site technical support, and content customization. Clients pay based on event duration or project duration, leveraging robots to enhance the technological feel, interactivity, and dissemination of their events without incurring high procurement and maintenance costs.

With the rapid advancements in artificial intelligence, service robots, and human-computer interaction technologies, coupled with the event industry's strong demand for 'differentiated experiences' and 'social media dissemination,' party robot rental is transitioning from a niche market to commercialization. In scenarios such as brand marketing, shopping mall traffic generation, wedding celebrations, and exhibitions, the value of robots as 'eye-catching tools' and 'interactive media' is increasingly being validated. Simultaneously, declining hardware costs and enhanced software customization make the rental model more cost-effective. In the future, intelligent robots combining large-scale voice interaction, emotion recognition, and AR/VR integration will further enhance user experience. Coupled with the high demand for technological displays in East Asia and the Middle East, this segment is expected to maintain rapid growth, but it is still in its early stages of development, and market education and standardized service capabilities are crucial.

This report studies the global Party Robot Rentals demand, key companies, and key
