Abstracts

Air suspension is a type of vehicle suspension powered by an electric or engine-driven air pump or compressor. This compressor pumps the air into a flexible bellows, usually made from textile-reinforced rubber. The air pressure inflates the bellows, and raises the chassis from the axle. Passenger car air suspension is that air suspension used in place of passenger car.

Scope of the Report:

This report focuses on the Passenger Car Air Suspension in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

An air suspension system in a passenger car is installed in order to have enhanced riding comfort as well as driving safety. Passenger cars that have an air suspension system installed can quickly and easily align themselves to the corresponding conditions of the terrain which they are currently driven on.

In the early 30s last century, American Firestone tire company firstly applied air suspension in car industry. In 1944 General motor company cooperated with Firestone Company on air suspension application in passenger car for first trial. The trial result showed air suspension system had inherent superiority.

Luxury passenger cars such as Mercedes-Benz, Audi, and BMW are increasingly demanded from regions such as Germany and China. The Americas also contribute significantly to the market segment, with the number of passenger cars equipped with air suspension expected to hit 0.81 million units by 2022 with the CAGR of 7.5% from 2017-2022.
