According to our (Global Info Research) latest study, the global Passenger Car Differential market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The differential is an important component in a passenger car, located between the drive shaft and the drive wheels. Its main function is to balance the speed difference between the left and right driving wheels when the vehicle is turning, prevent sliding and dragging between the tires, and ensure vehicle stability and handling. The differential automatically adjusts the driving force distribution according to the turning situation, so that the tires on the left and right sides rotate at different speeds, so that the vehicle can turn smoothly.
