Abstracts

The global Passenger Car Differential market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The differential is an important component in a passenger car, located between the drive shaft and the drive wheels. Its main function is to balance the speed difference between the left and right driving wheels when the vehicle is turning, prevent sliding and dragging between the tires, and ensure vehicle stability and handling. The differential automatically adjusts the driving force distribution according to the turning situation, so that the tires on the left and right sides rotate at different speeds, so that the vehicle can turn smoothly.
