The Passenger Information System, PIS, is the operating tool responsible for providing, at any time, visual and audio information to passengers at stations and transfer facilities, both automatically or programmed manually.

Scope of the Report:

This report studies the Passenger Information System market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Passenger Information System market by product type and applications/end industries. Passenger Information Systems are one of the most important elements of contemporary public transport. They significantly increase the travelling comfort for passengers, enabling them to obtain information needed to feel comfortable while travelling.

The information for passengers is displayed both on-board, at railway stations, hubs, stops and on platforms. It is mainly shown by electronic information displays of various types and dimensions and audio information devices, which are controlled by specialized devices (auto computers) or directly by computers (stationary solutions) that are based on information obtained from the relevant databases. Visual information in vehicles is provided by electronic direction boards installed in the front of vehicles, on their sides, in the rear and inside. Depending on the needed resolution and the available installation place, displays with different dimensions are used.

PIS is an integrated system. PIS manufacturers not only provide equipment to customers, but also offer designation and consultancy services to their customers. Actually, a PIS project usually last for a period of two-three years, which is related with

transportations' project scheme.
