## Abstracts

The global Passive Direct Attach Copper Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

With the rapid development of cloud computing and big data, the demand for high-speed data transmission in data centers continues to increase. As a low-latency, high-bandwidth connection solution, Passive Direct Attach Copper Cables are widely used in data centers to connect servers, switches, storage devices, etc., supporting fast and stable data transmission. In addition, in enterprise networks and communication networks, connections between servers and network devices require high-speed, reliable data transmission. Passive Direct Attach Copper Cables can meet these needs, provide high-bandwidth and low-latency connections, and are widely used in scenarios such as interconnection between servers and stacking connections of network devices.

Passive Direct Attach Copper Cables typically consist of copper conductors and connectors, eliminating the need for active optoelectronic devices such as fiber optics or optical modules. It is designed to provide low-cost, low-power and low-latency connectivity solutions. This type of cable usually comes in a fixed length, and both ends of the connector plug directly into the device's port without the need for additional adapters or modules.
