Abstracts

The global Passive Fire Products market size is expected to reach \$ 2931.1 million by 2030, rising at a market growth of 4.4% CAGR during the forecast period (2024-2030).

Passive Fire Protection (PFP) products are specialized materials and systems designed to enhance the fire resistance of structures by preventing or slowing down the spread of fire, smoke, and heat. Unlike active fire protection, which involves systems requiring a specific activation mechanism, passive fire protection is inherently built into the construction elements to provide a continuous and reliable defense against the effects of fire.
