According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

A passive implantable medical device refers to a medical device that is implanted inside the body or outside the body and does not require an external power source or battery to function properly. Such medical devices often rely on natural processes such as biology, physics, or chemical reactions to achieve their therapeutic, monitoring, or support functions. Passive implantable medical devices are often used for purposes such as monitoring physiological parameters, providing drug delivery, improving biological function, or promoting tissue healing.
