The passive integrated transponder (PIT) tag is a passive radio frequency identification (RFID) technology that contains a microchip and a coil antenna. It is activated by the electromagnetic field emitted by an external reader and can transmit the stored unique identification code without its own power supply. The PIT tag is small in size, long in life, and corrosion-resistant. It is widely used in scenarios such as wildlife tracking, aquaculture, laboratory animal management, and industrial asset identification. It is especially suitable for long-term monitoring or contactless individual identification in complex environments. It has the advantages of high reliability, low maintenance cost, and permanent identity identification.
