Abstracts

According to our (Global Info Research) latest study, the global Passive Memristor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A Passive memristor is a passive electronic component. Like a resistor, a memristor can generate and maintain a safe current through a device. But unlike resistors, memristors can 'remember' the amount of charge that passed through them even after the power is turned off. Two sets of memristors are more capable of performing the same functions as transistors, but on a smaller scale.
