**Passive design:** Passive NFC electronic luggage tags do not have a built-in battery, but work through the power provided by mobile phones and other devices. This makes the luggage tag lighter and more durable, and eliminates the need for battery replacement, reducing maintenance costs. **NFC technology:** NFC technology is a short-distance wireless communication technology that can communicate with electronic luggage tags through mobile phones and other devices to realize data transmission and reading. This technology has high security and reliability and can effectively protect personal information from being leaked. **E-paper display module:** Passive NFC electronic luggage tags use e-paper display modules. This display technology has the characteristics of low power consumption, no glare, visual comfort, etc., and can maintain static display without using electricity to maintain the image, which is more energy-saving and environmentally friendly. **High compatibility:** Passive NFC electronic luggage tags are compatible with a variety of mobile phones and devices, including Android and Apple phones, as well as airline APPs. This allows passengers to easily use their mobile phones to interact with luggage tags and complete traditional actions such as binding luggage information and printing and pasting luggage tags.

Passive NFC electronic luggage tag is an electronic luggage tag that uses NFC technology. It does not require a built-in battery, but provides power through mobile phones and other devices to achieve functions such as data transmission and display.
