According to our (Global Info Research) latest study, the global Passive Optical Network Power Meter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

PON is a technology that uses optical fiber to transmit data and is commonly used in broadband access networks in homes, businesses, and public places. Passive Optical Network Power Meter is an instrument used to measure the optical power level of passive optical networks. By measuring the optical power output from the optical fiber, the PON power meter can evaluate the connection quality of the optical fiber and determine whether the optical signal in the network reaches the target device. PON power meters usually have high accuracy and high resolution, are capable of measuring optical signal power at different wavelengths, and provide a variety of measurement modes and display options.

Currently, the key models of Passive Optical Network Power Meter include EXFO's PPM-350D, etc.
