Abstracts

The global Passive Protection Net market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Passive protection consists of four main components: steel wire mesh, ring mesh, (an additional layer of wire grating is required to intercept small rockfalls), fixed systems (anchors, anchor ropes, bases and support ropes), decompression rings and steel columns. Partial composition. The steel columns and steel wire mesh are connected and combined to form a whole, forming surface protection for the protected area, thereby preventing the collapse of rock and soil and playing a role in slope protection.
